SUMMARY

Junior Software Developer and AI enthusiast with hands-on project experience in Python, machine learning, generative AI, Unity game development, and GPS-based smart agriculture systems. Built projects ranging from AI-powered image generation and stock analysis tools to field monitoring and soil analysis applications. Passionate about turning ideas into practical solutions and eager to further strengthen technical, analytical, and problem-solving skills through real-world experience.

PROJECT

AI-Powered Precision Agriculture and Field Tracking System

- Developed a smart agriculture project focused on soil analysis and field tracking.
- Implemented a soil analysis module that identifies soil type from soil images.
- Combined image analysis results with user-provided data to detect soil deficiencies.
- Provided recommendations on how to improve soil quality based on detected needs.
- Suggested suitable crops for planting according to soil condition and entered data.
- Developed a tractor tracking module using a self-built GPS system.
- Tracked vehicle movement in real time during planting, harvesting, or spraying operations.
- Calculated scanned field coverage based on the working width of the selected equipment.
- Enabled field monitoring to identify which areas had already been processed.

GalacticStriker | Starter's Pack

- Contributed to the development of a mobile action game project.
- Worked on a fast-paced space-themed game concept.
- Gained experience in mobile game production and gameplay-focused design.

Unity Level Generator GAN

- Developed a GAN-based system for automatic 2D level generation in Unity.
- Designed the project to create level layouts in grid format.
- Generated visual outputs that could be integrated into Unity projects.
- Worked on procedural content generation and AI-supported level design.

For additional projects and a broader view of my work, please refer to my GitHub and itch.io portfolios.

EDUCATION

Aug 2023 - Jun 2028

Trakya University

Information Systems And Technologies

ADDITIONAL

- **Technical Skills:** Python, C#, Java, js , css, html , Machine Learning, SQL, Data Analysis, Unity Game Development , Figma
- **Languages:** English (B1) ,Turkish (Native)
- **Soft Skills:** Analytical Thinking,Problem Solving,Willingness to Learn and Self-Development,Teamwork,Communication Skills
